

DATA & GIS SERVICES

Scott Land knows the land with or without stepping outside of the office.

We generate informed solutions by offering a full range of Data Analysis and Geographic Information Systems (GIS) services with a creative, customized problem-solving approach.

Our Advantage

Our team uses a real-world view to provide solutions for projects. Using the latest technology available, our GIS specialists integrate spatial data with tabular attributes to identify, map, analyze and assess unique physical features to build tailored, four-dimensional solutions for your geographic requirements. Our experience in GIS and Data Analytics is extensive – enabling our experts to derive, interpolate and prioritize information to deliver real-time, efficient and cost-effective results for our clients.

GIS Services

Site & Route Analysis

- Proximity to existing infrastructure
- Terrain suitability and analysis
- Constraint analysis including disposition mapping
- Land ownership and stakeholder identification
- Construction offsets analysis and local bylaws referencing

Visual Reporting

- Acquisition, consultation and notification mapping
- Web based synchronized GIS reporting
- Converting complex data sets into clear, concise, time-saving visual reports
- Custom visual dashboards including key performance indicators

Portfolio of Projects

- Pipeline, acquisition and integrity programs
- Wind, solar and battery storage projects
