

PIPELINES

Pipelines are essential to Canada

Your next project is critical and Scott Land is standing by for your request. We understand that stakeholder engagement and right-of-way acquisition is such an important factor in moving a pipeline forward. With growing opposition to many pipelines, your choice of land company is critical to the success of your project. Our focus at Scott Land is on providing exceptional service, effective stakeholder engagement, quality paperwork, meeting deadlines and creating significant value for our clients!

It's our business, we're the experts

Scott Land is one of the most trusted and respected land companies in the industry bringing value through the vast amount of experience our team holds. We employ a dedicated Indigenous and stakeholder engagement team who have a stellar reputation in the field that gets you results. We acquire over one thousand kilometres of ROW each year and more applications at AER than any other firm. We have the capacity and the expertise to take on any project, however complex.

No project is too big or small

Scott Land has handled a wide range of important linear projects in Canada over the past 30+ years. Our clients include a broad spectrum of companies including major pipeline companies, midstream companies and energy producers of all sizes. Products include bitumen, oil, gas, liquids, diluents, and even CO2. Projects range from big inch NEB lines to small tie-ins, as well as land for related facilities on both Freehold and Crown lands. We are even involved in one of the large LNG pipelines to the west coast. Non-oil & gas linear project experience spans water and waste water pipelines, power transmission, utilities and transportation.

How we will work for you

- Land and right-of-way acquisitions
- Project management
- Stakeholder engagement and public consultation
- Strategic planning and advice
- Indigenous consultation
- Fee simple purchase/options
- Site purchase
- Administration & registration
- Data management
- Attendance at hearings
- Pre and post-construction attendance
- Feasibility studies

"Most recently, we employed Scott Land & Lease to manage the acquisition of a 27.5 kilometer pipeline just outside of Cold Lake, Alberta. This line involved both Crown and Freehold acquisitions. Scott Land successfully completed this project from consultation to notifications, to permit application and land acquisition, during a time when the AER was in transition and timelines and policies were uncertain. Despite these major challenges, they completed the project on time and on budget."
